### Aeronautical and aerospace expertise

Development processes in the aeronautical and aerospace sector are often based on complex, interdisciplinary requirements. Our experience in implementing interdisciplinary projects means we can understand the context and solve the difficult problems it poses. Interdisciplinary networked projects have long been part and parcel of our work. We can obtain information and assign specifications in work packages at each phase of the project. This applies to all stages of the development process from design and realisation to module testing. We develop flight hardware in line with the applicable standards and guidelines, as we do ground infrastructure solutions. Customers regularly praise our rapid and flexible development schedules; another benefit is our long-standing collaboration with qualified manufacturing firms. Challenge us!

### Certified quality

- >> DIN EN ISO 9001:2008
- >> DIN EN 9100 (2<sup>nd</sup> quarter, 2011)

### enders Ingenieure – engineering partners

Are you looking for defined contact people? We have them. Do you value fair, frank cooperation? So do we. Complex hierarchies and endless hurdles in key decision-making processes have no place at enders. It's hard to put enders into words. Talking to us, or even coming with a specific project, is the best way to get to know us: we can demonstrate our strengths and the synergies offered by our interdisciplinary team of specialists. enders Ingenieure owes its strong position today to 50 years of close partnerships, drive and enthusiasm and absolute reliability in project implementation. Today, the company is a lean and efficient modern "solution centre". Our services go beyond customised detailed solutions. Our work is carefully designed for smooth integration into our customers' overall concept.
